

# BUILT-IN HALF OPEN WOODSTONE BIRD NEST BOX

**SPECIES:** Bird  
**OUTER DIMENSIONS:** 21.5 x 21.5 x 15 cm  
**MATERIAL:** WoodStone (wood concrete)  
**COLOUR:** Grey  
**INSTALLATION:** Built into masonry or surface-mounted

The Built-In Half Open WoodStone Bird Nest Box is designed for seamless integration into brickwork, providing a durable and discreet nesting space for a range of small bird species. Manufactured to match standard UK brick dimensions, the box can be built directly into new-build masonry so it sits flush with the wall surface.

This half-open design offers suitable nesting conditions for species that prefer more open-fronted cavities, such as robins, wagtails and redstarts. The species that ultimately use the box will depend on the surrounding habitat and its placement on the building.

## DESIGN & CONSTRUCTION

- Designed to match standard UK brick dimensions
- Suitable for integration into brickwork during construction
- Can also be mounted externally on existing walls
- Half-open front design for species that prefer open nest sites
- Raised entrance edge allows a neat plastered finish
- Made from durable WoodStone (wood concrete)

The nest box is manufactured from WoodStone, a robust blend of FSC-certified wood fibres and concrete that offers excellent insulation, weather resistance and long service life.

## SUITABLE SPECIES

The half-open design may be used by several species depending on the surrounding habitat, including:

- Robin
- Wren
- Black Redstart
- Common Redstart
- White Wagtail
- Yellow Wagtail
- Spotted Flycatcher
- House Sparrow

## SITING GUIDANCE

- Install preferably beneath eaves or roof overhangs
- Recommended installation height: 3–4 metres or higher
- North or east-facing façades are preferred
- Avoid prolonged exposure to direct sunlight

- Avoid southwest-facing walls where heavy rain exposure may occur
- Do not install directly above doors or windows
- When built into the façade, the entrance edge can be plastered to create a clean finish that blends with the surrounding wall.

## **MAINTENANCE**

This nest box is non-openable and requires very little maintenance. If required, nesting material can be removed through the entrance opening during the winter months when the box is not in use.
